

## From protected mobility to unmanned ground systems

From June 15 to 19, 2026, **SOFRAME** (LOHR Group) exhibits at the Eurosatory trade show, one of the biggest international events dedicated to **defense and security**.

Renowned for its expertise and commitment, **SOFRAME** showcases its **innovative solutions and international technology partnerships**.

**SOFRAME's skilled teams** and **state-of-the-art industrial capabilities** are committed to customer satisfaction all along product life-cycle:

- Efficient, modular and innovative solutions designed to meet customer needs
- Huge and flexible production capabilities to comply with short deadlines
- Dedicated resources to ensure performant in-service support on the long term.

As a trusted partner, **SOFRAME** is committed to Corporate Social Responsibility (CSR) by addressing human, environmental and social topics, for ever greater sustainable performance.

**SOFRAME** welcomes you to its outdoor booth

PROTECT YOUR FUTURE  
THE GLOBAL EVENT FOR  
DEFENCE AND SECURITY

### Stand EXT Pe6a-B211

Parc des expositions  
Paris Nord 93420 Villepinte  
PARIS - FRANCE

We are looking forward to welcoming you to discuss about our latest news and innovations!

**DEFENSE & SECURITY**

ON DISPLAY

**X-FIRE Launcher:** Developed in partnership with Thales as a sovereign capability for long-range land-based strikes, the X-FIRE launch system is capable of deploying a wide range of missiles with a range of up to 1,000 km.

Mounted on the proven Daimler Truck Zetros platform, the vehicle offers excellent off-road performance and enhanced crew protection in accordance with STANAG 4569 and AEP-55 standards.

**LMPAV - Véhicule blindé léger multi-rôle:** A multi-role 4x4 armored vehicle combining protection, mobility and payload capacity.

The vehicle on display features an EM&E Guardian L-HIT RCWS with a 30x113 cannon, an ATRI Thermal Imaging Driver Vision Enhancer and a rear steering axle, providing enhanced firepower, situational awareness and maneuverability.

A Korea CNO Tech Air Drop Tactical Drone is also displayed on the vehicle. Compatible with both lethal and non-lethal payloads, it demonstrates SOFRAME's ability to integrate innovative technologies into a cohesive and operational platform.

**DORCUS:** Developed in partnership with the Brazilian company MACJEE, the DORCUS (Deployable Off-Road Combat Unit System) is a fully integrated 4x4 indirect-fire combat vehicle.

Designed to provide highly mobile forces with protected mobility and deployable rocket-based fire support.

At Eurosatory, a DORCUS concept vehicle in the 10-12 tonne class is exhibited, featuring Level 2 protection and a 700 km operating range.

**Mission Master CXT2:** Fully autonomous, diesel hybrid drive A-UGS (Autonomous Unmanned Ground System) designed by Rheinmetall Canada, for extreme mobility operations in challenging environments.

**Aurochs 2:** Developed by the French-German Research Institute of Saint-Louis (ISL) and manufactured by Soframe, is an advanced compact unmanned ground vehicle designed for military operations.

Its adaptive suspension, silent electric propulsion, and GPS-free navigation via computer vision allow for exceptional mobility and covered operations in denied environments. Equipped with an optional Remote-Controlled Weapon Station (RCWS), the system can be operated remotely via a tablet, enabling fire support missions while significantly reducing soldier exposure.

**Fardier MkII:** Versatile unmanned ground vehicle combining mobility, endurance and payload flexibility designed and manufactured by Soframe.

Capable of integrating a wide range of mission systems, its support military operations while reducing personnel exposure in high-risks environments. The vehicle on display is presented in a fire support configuration fitted with an FN DeFNder Medium RCWS with 30-millimeter cannon, illustrating the platform integration capabilities.
